CAREER OBJECTIVE

Computer Science undergraduate with hands-on experience in machine learning, natural language processing, and Python-based cybersecurity projects. Experienced in applied ML workflows, computer vision, and research-oriented development, seeking an opportunity to apply technical skills in real-world environments.

CAREER SUMMARY

- Applied research project on NLP using machine learning techniques; worked with faculty supervisors on methodology and results.
- Python-based data preprocessing, feature preparation, model training and evaluation for experimentation and analysis.
- Developed a YOLO-based object detection model for electronic component recognition (dataset preparation, training and evaluation).
- Built a modular reconnaissance tool for automated information gathering, target enumeration and basic OSINT workflows.

TECHNICAL SKILLS

Machine Learning & AI	:	Supervised Learning, Model Training & Evaluation, Data Preprocessing, NLP, Python
Computer Vision	:	Object Detection (YOLO), Dataset Preparation and Annotation using Roboflow
Cybersecurity	:	Ethical Hacking, Web Exploitation, Wireshark, Burp Suite, Nmap, Metasploit, Linux
Tools	:	Git/GitHub, VS Code, Google Colab, Jupyter Notebook

PROJECTS

Machine Learning & NLP Research Project (Undergraduate Thesis)

Green University of Bangladesh | 2025 - Present | Dhaka, Bangladesh

- Conducted NLP-focused applied research using machine learning techniques.
- Performed data preprocessing, feature preparation, model training and evaluation in Python.
- Collaborated with supervisors on research methodology and reporting.

Electronic Component Detection - Computer Vision Project

AI/ML Workshop Project | 2025 | Dhaka, Bangladesh

Repository: https://github.com/LTNEW52/Bondstein-Project-Electronic-Component-Detection

- Developed an object detection system using YOLO for electronic component recognition.
- Prepared/annotated datasets; performed model training, testing and evaluation.

Apocrypha - Python-Based Reconnaissance Tool

Cybersecurity Project | 2025 | Remote

Repository: https://github.com/LTNEW52/Apocrypha

- Designed and developed a Python-based reconnaissance tool for automated information gathering.
- Implemented target enumeration and basic OSINT workflows; modular architecture for easy extension.

EDUCATIONAL QUALIFICATION

Bachelor of Science in Computer Science & Engineering (CSE)
Green University of Bangladesh
| 2022 - Present | Dhaka, Bangladesh | CGPA: **3.55** / 4.00

Higher Secondary Certificate (HSC), Science
Government Science College
| 2018 - 2020 | Dhaka, Bangladesh | GPA: **5.00** / 5.00

Secondary School Certificate (SSC), Science
Monipur High School and College
| 2007 - 2018 | Dhaka, Bangladesh | GPA: **5.00** / 5.00

TRAINING & COURSES

- Introduction to Security - Stratosphere Research Laboratory, Czech Technical University in Prague
- Artificial Intelligence, Machine Learning & The IoT Bootcamp - Bondstein Technologies Limited
- Ethical Hacker - Cisco
- Endpoint Security - Cisco
